Subject Index

A

AAO3 gene
  abscisic acid biosynthesis and catabolism, 167–69, 174
ABC models
  microsporogenesis and microgametogenesis in flowering plants, 397–99
ABC transporters
  evolution of flavors and scents, 320
  solute transporters of plastid envelope membrane and, 141, 143, 149–50
Abiotic stress
  abscisic acid biosynthesis and catabolism, 165, 174
  plant-specific calmodulin-binding proteins and, 435, 443–49
Abscisic acid (ABA)
  biosynthesis and catabolism
    ABA glucosyltransferase, 171
    abiotic stress adaptation, 174
    AOG, 171
    biosynthesis, 166–69, 172
    C_{15} cytosolic pathway, 168–69
    catabolism, 169–70
    conjugation, 170–71
    CYP707A genes, 170
    dormancy, 173
    embryogenesis, 172–73
    epoxy-carotenoids, 166–68
    evolution, 175–77
    fungi, 175
    future research, 177
    germination, 173
    hydroxylation, 168, 170
    introduction, 166
    lower plants, 175–77
    maturation, 172–73
    metabolism, 171–77
    pathways, 166–70
    regulation, 171–74
    seeds, 172–73
    summary, 177
    xanthophyll cleavage, 168
  legume seed development and, 256, 261–62
Acetolactate synthase
  inteins and, 379–81
Acetylation
  chromatin dynamics and, 331
Acicular crystals
  calcium oxalate in plants and, 44
Acidic transcriptional activation domain (AAD)
  phytopathogenic bacterial type III effectors and, 517
Acidification
  CO_2-concentrating mechanisms in algae and, 105–6, 111, 120
Actins
  cytokinesis in higher plants and, 289–90
Active transport
  CO_2-concentrating mechanisms in algae and, 104–5
Acyltransferases
  evolution of flavors and scents, 301, 305, 309–16, 318–19
Adaptins
  endocytic cycling of plasma membrane proteins and, 228–29
Adaptor complexes
  endocytic cycling of plasma membrane proteins and, 228–29, 240

ADP-ribosylation factor (ARF)
endocytic cycling of plasma membrane proteins and, 229–30
AG genes
microsporogenesis and microgametogenesis in flowering plants, 401–3
Agrobacterium tumefaciens
inteins and, 383, 385
Air filtration
phytoremediation and, 18
Aldehyde oxidase
abscisic acid biosynthesis and catabolism, 167–69
Algae
abscisic acid biosynthesis and catabolism, 175–76
calcium oxalate in plants and, 41, 45
CO_2-concentrating mechanisms in algae and, 99–120
redox regulation and, 195
solute transporters of plastid envelope membrane and, 149, 155
Allium cepa
vernalization and, 494
Aluminum
calcium oxalate in plants and, 50
Alyssum bertolonii
phytoremediation and, 20
Amylases
starch degradation and, 73, 75–80, 82–88, 91
Anabaena spp.
CO_2-concentrating mechanisms in algae and, 107–8, 115
Angiosperms
calcium oxalate in plants and, 41, 45
microsporogenesis and microgametogenesis in flowering plants, 393–420
self-incompatibility and, 467–83
Anther
microsporogenesis and microgametogenesis in flowering plants, 393, 395–96, 404, 407, 419
self-incompatibility and, 471
Antirrhinum spp.
microsporogenesis and microgametogenesis in flowering plants, 397–98, 403
self-incompatibility and, 477–78
solute transporters of plastid envelope membrane and, 146
AOG gene
abscisic acid biosynthesis and catabolism, 171, 174
AP1 gene
vernalization and, 496
Apoptosis
phytopathogenic bacterial type III effectors and, 512–14
redox regulation and, 205
self-incompatibility and, 467, 481–82
Arabidopsis thaliana
abscisic acid biosynthesis and catabolism, 166–74
chromatin dynamics and, 327, 330–40
cytokinesis in higher plants and, 281–93
endocytic cycling of plasma membrane proteins and, 228–35, 238, 240
evolution of flavors and scents, 304–6, 309–11, 314–18
history of research, 11
inteins and, 383
legume seed development and, 254–55, 258–59, 261–62, 266–67, 269
microsporogenesis and microgametogenesis in flowering plants, 395–97, 400, 403–5, 407–20
phytopathogenic bacterial type III effectors and, 510, 512, 514–17, 519, 521–22
phytoremediation and, 24, 26, 31
plant-specific calmodulin-binding proteins and, 437–38, 443–54
redox regulation and, 190–93, 202, 206
self-incompatibility and, 473–74
shoot branching and, 353–69
solute transporters of plastid envelope membrane and, 134–40, 142–50, 154–55
starch degradation and, 73–91
vernalization and, 493–503
Arabinose
starch degradation and, 80
ARAMEMNON database
solute transporters of plastid envelope membrane and, 135, 140, 150
Artemesia annua
evolution of flavors and scents, 315–17
Arum maculatum
starch degradation and, 87
Ascophyllum spp.
CO_2-concentrating mechanisms in algae and, 112
Asterionella buxleii
CO_2-concentrating mechanisms in algae and, 117
Atomic energy
history of research, 6, 10
ATP-dependent remodeling complex
chromatin dynamics and, 328–29
Atrazine
phytoremediation and, 16, 20, 29
Autoinhibition

shoot branching and, 361–62
Autoinhibitory domain (AID)
plant-specific calmodulin-binding proteins and, 445
Auxins
endocytic cycling of plasma membrane proteins and, 221–23, 236–37, 240
shoot branching and, 353–69
avr genes
phytopathogenic bacterial type III effectors and, 511–23
AvrRpt2 cysteine protease
phytopathogenic bacterial type III effectors and, 520–22
Axillary meristem
shoot branching and, 353–69
Azolla spp.
phytoremediation and, 20–21

B

Bacillus circulans
inteins and, 385
Bacteria
history of research, 4–5
phytopathogenic bacterial type III effectors and, 509–24
phytoremediation and, 15–31
Bangiomorpha spp.
CO_2-concentrating mechanisms in algae and, 118
BcABA1 gene
abscisic acid biosynthesis and catabolism, 177
Benzene
phytoremediation and, 16
Beta vulgaris
vernalization and, 495
B function genes
microsporogenesis and microgametogenesis in flowering plants, 399–400, 403–4
Bioaugmentation
phytoremediation and, 23–24
Bioavailability
pollutant
phytoremediation and, 21–22, 31
Biofiber production
inteins and, 387–88
Bioinformatics
solute transporters of plastid envelope membrane and, 133–42, 155
Biological stresses
redox regulation and, 205–6
Bioremediation
phytoremediation and, 15
Biosynthesis
abscisic acid biosynthesis and catabolism, 165–77
calcium oxalate in plants and, 51–52
microsporogenesis and microgametogenesis in flowering plants, 393
Biotic stress
plant-specific calmodulin-binding proteins and, 435, 449–53
Botrytis cinerea
abscisic acid biosynthesis and catabolism, 175, 177
Bouteloua spp.
phytoremediation and, 20
Brassica spp.
abscisic acid biosynthesis and catabolism, 170
evolution of flavors and scents, 304
legume seed development and, 263–64, 267
microsporogenesis and microgametogenesis in flowering plants, 394
phytoremediation and, 20–21
self-incompatibility and, 467–74, 482–83
vernalization and, 495
Brefeldin A
endocytic cycling of plasma membrane proteins and, 221, 236–38, 240
Buchloe dactyloides
phytoremediation and, 20
Bud activity
shoot branching and, 359–60, 362
Bud dormancy
vernalization and, 494

C

C_{15} cytosolic pathway
abscisic acid biosynthesis and catabolism, 168–69
Ca^{2+}
calcium oxalate in plants and, 41, 46–48
plant-specific calmodulin-binding proteins and, 435–56
redox regulation and, 205
self-incompatibility and, 467, 479–83
vernalization and, 501
Caenorhabditis elegans
endocytic cycling of plasma membrane proteins and, 228
history of research, 11
microsporogenesis and microgametogenesis in flowering plants, 412

plant-specific calmodulin-binding proteins and, 455
Cab genes
CO_2-concentrating mechanisms in algae and, 109–10, 114
Calcium oxalate (CaOx) crystals
formation and function
aluminum detoxification, 50
biosynthesis, 51–52
calcium regulation, 46–48
cell specializations, 52–56
chemistry, 42–44
conclusions, 60
crystal content mutants, 59–60
crystal morphology mutants, 58–59
distribution, 45–46
formation, 56–58
function, 46–51
genetics, 58–60
heavy metal detoxification, 50
human health, 50–51
introduction, 42
morphology, 44–45
plant protection, 48–50
regulation, 58–60
summary, 60–61
synthesis, 56–58
Calmodulin (CaM)-binding proteins
plant-specific
abiotic stress, 443–49
biotic stress, 449–53
Ca^{2+}-modulated proteins, 437–39
Ca^{2+} signaling, 436–37
calmodulin-target interactions, 439–43
cold stress, 445–46
conclusions, 456
environmental stresses, 447–48
future research, 456
γ-aminobutyric acid, 447–48
glutamate decarboxylase activation, 447–48
heat stress, 445–46
hormonal treatment, 453–54
introduction, 436–37
osmotic stress, 444–45
oxidative stress, 446–47
pathogen response, 449–53
plant development, 453–56
polarized cells, 454–56
salinity, 444–45
targets, 451–53
xenobiotic compound tolerance, 448–49
Calothrix spp.
CO_2-concentrating mechanisms in algae and, 107
Calreticulin
calcium oxalate in plants and, 53, 56–57
Carbohydrate
legume seed development and, 253–70
starch degradation and, 73–91
Carbon
CO_2-concentrating mechanisms in algae and, 99–117
legume seed development and, 265
solute transporters of plastid envelope membrane and, 144–45
starch degradation and, 74, 80–82, 84–86
Carbon dioxide (CO_2)
redox regulation and, 188, 202
starch degradation and, 81–82
Carbon dioxide (CO_2)-concentrating mechanisms in algae
acidification, 105–6, 111
active transport, 104–5
algae lacking CCMs, 106, 112
C_1 acquisition, 106–7
$C_3 + C_1$ carboxylations, 103, 111–12
C_4, 103, 111–12
carboxysome, 99, 108–9, 117
Chlorarachniophyta, 109–11
Chlorophyta, 109–11
chromist algae, 112–14
compartmentalization, 105–6
conclusions, 119
crassulacean acid metabolism, 103
cyanobacteria, 106–9
cytosol, 107–11, 113
dinoflagellates, 112–14
dissolved inorganic carbon, 104–8, 110–15
environmental modulation, 114–17
Euglenophyta, 109–11
evidence for, 101–2
evolution, 117–19
introduction, 100–6
light availability, 115
mechanisms, 101–2
nutrients, 115–16
overview, 100–6
plastid envelope, 113–14
plastids, 110–11
prospects, 119
red algae, 112–14
Rubisco, 105–6
stroma, 114
summary, 119–20

thylakoids, 111
Carbonic anhydrases
CO_2-concentrating mechanisms in algae and, 99, 111
Carboxylation
CO_2-concentrating mechanisms in algae and, 103, 111–12
Carboxysomes
CO_2-concentrating mechanisms in algae and, 99, 108–9, 117
Cargo delivery
cytokinesis in higher plants and, 286–87
Carotenoids
abscisic acid biosynthesis and catabolism, 165–68
Casparian strip
phytoremediation and, 26
Catabolism
abscisic acid biosynthesis and catabolism, 165–77
Cation exchange capacity (CEC)
phytoremediation and, 21–23
CBF genes
vernalization and, 494, 501
ccm1 gene
CO_2-concentrating mechanisms in algae and, 115
Cell cycle
legume seed development and, 257–58
Cell division
microsporogenesis and microgametogenesis in flowering plants, 393
Cell function
microsporogenesis and microgametogenesis in flowering plants, 407
Cell plate
cytokinesis in higher plants and, 281–84, 286–88
Cell wall
cytokinesis in higher plants and, 281–93
phytopathogenic bacterial type III effectors and, 516–17
Cercospora spp.
abscisic acid biosynthesis and catabolism, 175
Cereal endosperms
starch degradation and, 73–75, 78, 86–91
C function genes
microsporogenesis and microgametogenesis in flowering plants, 401–4
Chara zeylanica
CO_2-concentrating mechanisms in algae and, 109
Chelation
calcium oxalate in plants and, 52
phytoremediation and, 15, 22–23, 25–27, 28–29
Chitin-binding domain (CBD)
inteins and, 385
Chlamydomonas reinhardtii
abscisic acid biosynthesis and catabolism, 176–77
CO_2-concentrating mechanisms in algae and, 109–11, 114–16, 119
redox regulation and, 195–98, 204–5, 208
solute transporters of plastid envelope membrane and, 149–50
Chlorarachniophyta
CO_2-concentrating mechanisms in algae and, 109–11
Chlorella spp.
CO_2-concentrating mechanisms in algae and, 110, 115
Chloromonas spp.
CO_2-concentrating mechanisms in algae and, 111
Chlorophyta
CO_2-concentrating mechanisms in algae and, 109–11
Chloroplasts
starch degradation and, 73, 75–90
chp genes
CO_2-concentrating mechanisms in algae and, 108
Chromatin dynamics
ATP-dependent remodeling complex, 328–29
biology, 337–40
conclusions, 340
DNA methylation, 334–35, 339–41
histones
acetylation, 331
code, 331
deacetylation, 331
methylation, 331–33, 339–41
modification, 331–33
variants, 335–36
imprinting, 338–39
introduction, 328
paramutation, 338
polycomb group, 333–34
RNAi-dependent histone and DNA methylation, 339–41
RNA-induced gene silencing, 336–37
structure, 328–37
summary, 341
trithorax group, 333–34
vernalization, 337–38
Chromist algae
CO_2-concentrating mechanisms in algae and, 112–14

Chromodomain
vernalization and, 498
Chromosomal dynamics
microsporogenesis and microgametogenesis in flowering plants, 408–15
cia5 gene
CO_2-concentrating mechanisms in algae and, 115
Cinnamomum tenuipilum
evolution of flavors and scents, 316–17, 319
cis-splicing
inteins and, 377
Citrus junis
abscisic acid biosynthesis and catabolism, 170
Cladosporium fulvum
phytopathogenic bacterial type III effectors and, 512
plant-specific calmodulin-binding proteins and, 450
Claoxylon sandwisence
calcium oxalate in plants and, 48
Clarkia breweri
evolution of flavors and scents, 301, 305, 308, 310–11, 313–18
Cloning
history of research, 5
*cmp*ABCD operon
CO_2-concentrating mechanisms in algae and, 106
Coccomyxa spp.
CO_2-concentrating mechanisms in algae and, 106, 109–10
cod genes
calcium oxalate in plants and, 59–60
Colchicine
calcium oxalate in plants and, 55
Cold adaptation
vernalization and, 491–503
Cold stress
plant-specific calmodulin-binding proteins and, 445–46
Compartmentation
CO_2-concentrating mechanisms in algae and, 105–6
endocytic cycling of plasma membrane proteins and, 232, 234–35
phytoremediation and, 21, 25–28
Competitive interaction phenomenon
self-incompatibility and, 478
Conjugation
abscisic acid biosynthesis and catabolism, 165, 170–71
Constructed wetlands
phytoremediation and, 18–20, 24
Convergence
microsporogenesis and microgametogenesis in flowering plants, 403–4
Convergent evolution
evolution of flavors and scents, 301, 304
COR phytotoxin
phytopathogenic bacterial type III effectors and, 524
Corynebacterium spp.
legume seed development and, 268
Cotesia rubecula
evolution of flavors and scents, 304
Crassulacean acid metabolism
CO_2-concentrating mechanisms in algae and, 101, 103
solute transporters of plastid envelope membrane and, 145
Crystal chamber
calcium oxalate in plants and, 44–45, 54–56
Crystalloplasts
calcium oxalate in plants and, 52–55
Crystal sand
calcium oxalate in plants and, 44
csoS3 gene
CO_2-concentrating mechanisms in algae and, 109
cue1 gene
solute transporters of plastid envelope membrane and, 146–47
Curcurma zedoaria
starch degradation and, 87
Cyanidioschyzon merolae
CO_2-concentrating mechanisms in algae and, 112
solute transporters of plastid envelope membrane and, 149
Cyanobacteria
CO_2-concentrating mechanisms in algae and, 99, 101, 104, 106–9, 112, 114, 117–19
CycD gene
legume seed development and, 258
CYP707A genes
abscisic acid biosynthesis and catabolism, 165, 170–71, 173–74, 176–77
Cysteine proteases
phytopathogenic bacterial type III effectors and, 519–22
Cytokinesis
in higher plants
actin filaments, 289–90

cargo delivery, 286–87
cell plate, 283–84, 286–88
conclusions, 293
cytoskeleton dynamics, 289–93
introduction, 282
membrane dynamics, 282–89
membrane fusion, 284–89
microtubules, 289–93
phragmoplast, 289–93
plasma membrane, 288–89
summary, 293
vesicle trafficking, 283–84
microsporogenesis and microgametogenesis in flowering plants, 415–16
Cytoskeleton
cytokinesis in higher plants and, 281–93
endocytic cycling of plasma membrane proteins and, 232–33
Cytosol
CO_2-concentrating mechanisms in algae and, 107–8, 110–11, 113
legume seed development and, 267
solute transporters of plastid envelope membrane and, 133–56
starch degradation and, 73, 75–76, 79–80, 85, 90–91

D

Deacetylation
chromatin dynamics and, 331
Debranching
starch degradation and, 77–78, 84
Decontamination
phytoremediation and, 15–31
Defense response
calcium oxalate in plants and, 48–50, 60–61
phytopathogenic bacterial type III effectors and, 509
Degradation
microsporogenesis and microgametogenesis in flowering plants, 393
pollutant
phytoremediation and, 15, 19–21, 23, 26, 28–31
protein
microsporogenesis and microgametogenesis in flowering plants, 393
self-incompatibility and, 467–83
starch degradation and, 73–91
Dehiscence
microsporogenesis and microgametogenesis in flowering plants, 393, 419–20
Dense nonaqueous phase liquid (DNAPL)
phytoremediation and, 21
Determinant genes
self-incompatibility and, 467–77, 479–80, 483
Detoxification
calcium oxalate in plants and, 46, 50, 61
Development
legume seed development and, 253–70
microsporogenesis and microgametogenesis in flowering plants, 393–420
plant-specific calmodulin-binding proteins and, 453–56
redox regulation and, 200–2
shoot branching and, 353–69
solute transporters of plastid envelope membrane and, 145
Dicots
shoot branching and, 354–62
Differentiation
legume seed development and, 260–61
microsporogenesis and microgametogenesis in flowering plants, 393, 404–5, 407
Dinoflagellates
CO_2-concentrating mechanisms in algae and, 112–14
Discrimination
self-incompatibility and, 467–83
Dissolved inorganic carbon (DIC)
CO_2-concentrating mechanisms in algae and, 99–17
Distichlis spicata
phytoremediation and, 20
Disulfide groups
redox regulation and, 187–209
Divergence
evolution of flavors and scents, 301, 306
microsporogenesis and microgametogenesis in flowering plants, 403–4
Diversity
CO_2-concentrating mechanisms in algae and, 99
redox regulation and, 195–96
shoot branching and, 354–56
DMT superfamily
solute transporters of plastid envelope membrane and, 147, 155
DNA methylation
chromatin dynamics and, 327, 334–35, 339–41
DNA microarrays
history of research, 11–12
"Doers"

science in modern society and, 8
Dormancy
abscisic acid biosynthesis and catabolism, 173
shoot branching and, 358–59
vernalization and, 494
dpe genes
starch degradation and, 81, 83, 90
Drosophila spp.
chromatin dynamics and, 333
endocytic cycling of plasma membrane proteins and, 228
history of research, 2
microsporogenesis and microgametogenesis in flowering plants, 412, 415
plant-specific calmodulin-binding proteins and, 455
Druse crystals
calcium oxalate in plants and, 43–45, 54–55
Dunaliella spp.
abscisic acid biosynthesis and catabolism, 176
CO_2-concentrating mechanisms in algae and, 110, 116–17
Duplication
evolution of flavors and scents, 301, 306
Dynamins
endocytic cycling of plasma membrane proteins and, 230–31

E

Ecology
history of research, 6
Economics
phytoremediation and, 31
EDTA
phytoremediation and, 22
Eichhornia crassipes
phytoremediation and, 20
Electrostatically-interacting proteins
redox regulation and, 196
Elodea spp.
phytoremediation and, 20
Elysia chlorotica
CO_2-concentrating mechanisms in algae and, 114
Embryogenesis
abscisic acid biosynthesis and catabolism, 172–73
legume seed development and, 253
Embryonic transfer cells
legume seed development and, 258–60
Emiliana huxleyii
CO_2-concentrating mechanisms in algae and, 113, 117
EMS1/EXS gene
microsporogenesis and microgametogenesis in flowering plants, 405–7
Endocytic cycling
plasma membrane proteins and
adaptins, 228–29
adaptor complexes, 228–29
animals, 222–28
ARFs/ARF-GEFs, 229–30
auxin transport proteins, 236–38
compartmentation, 234–35
conclusions, 240
cytoskeleton, 232–33
dynamins, 230–31
endocytosis, 233–36
endosomes, 235
gnom, 236–38
introduction, 222
KAT1 inwardly rectifying potassium channel, 238–39
miscellaneous proteins, 233
overview, 222–28
plants, 233–40
protein components of mechanisms, 229–34
Rab GTPases, 231–32
recycling, 236
SNAREs, 232
summary, 240
Endosomes
endocytic cycling of plasma membrane proteins and, 235, 240
Endosperms
starch degradation and, 73–75, 78, 86–91
Energy budget
CO_2-concentrating mechanisms in algae and, 99, 115–16
legume seed development and, 253, 263–64
5-Enolpyruvylshikimate-3-phosphate synthase
inteins and, 381–83
Environmental cleanup
phytoremediation and, 15–31
Environmental factors
CO_2-concentrating mechanisms in algae and, 99, 114–17
vernalization and, 491–503
Environmental stress
plant-specific calmodulin-binding proteins and, 435, 443–53
redox regulation and, 205–6
Epigenetic inheritance

chromatin dynamics and, 327–41
vernalization and, 491–503
Epistasis
history of research, 9
Epoxy-carotenoids
abscisic acid biosynthesis and catabolism, 166–68
Erwinia spp.
phytopathogenic bacterial type III effectors and, 510
Escherichia coli
endocytic cycling of plasma membrane proteins and, 223
history of research, 4
inteins and, 380–82, 384–85, 387
redox regulation and, 196
self-incompatibility and, 479
solute transporters of plastid envelope membrane and, 149
starch degradation and, 79
ESD4 gene
vernalization and, 501
Ethics
science in modern society and, 8
Euchromatin
vernalization and, 498
Eugenol
evolution of flavors and scents, 304, 308, 319
Euglenophyta
CO_2-concentrating mechanisms in algae and, 109–11
Evolution
abscisic acid biosynthesis and catabolism, 175–77
calcium oxalate in plants and, 46
CO_2-concentrating mechanisms in algae and, 99, 117–19
flavors and scents, 301–20
history of research, 11
EXS genes
microsporogenesis and microgametogenesis in flowering plants, 405–7
Extraction
pollutant
phytoremediation and, 15, 19–20, 25, 27

F

Farming
of polluted soil or vegetative cap
phytoremediation and, 18
Fatty acids
evolution of flavors and scents, 301, 306
F-box protein
self-incompatibility and, 467–83
Female determinant
self-incompatibility and, 470, 472, 474–76, 479
Ferredoxin
redox regulation and, 187–209
Filial control
legume seed development and, 257–60
FLACCA gene
abscisic acid biosynthesis and catabolism, 168
Flavors and scents
evolution of
acyltransferases, 309–12, 315–16, 318–19
Clarkia breweri scent, 313–17
enzyme activities, 304–5
introduction, 302
O-methyltransferases, 306–9, 313–15, 318
overview, 302–3
Rosaceae scents and flavors, 305–13
sweet basil flavor, 317–19
terpene synthases, 313, 315, 317, 319
volatile compound emission, 303–4, 319–20
FLC genes
vernalization and, 495–503
FLM genes
vernalization and, 501
Floral and inflorescence meristem identity genes
shoot branching and, 366–67
Flowering plants
self-incompatibility and, 467–83
vernalization and, 491, 494
Flux
legume seed development and, 253, 265, 267
starch degradation and, 80–83, 91
FM4-64
endocytic cycling of plasma membrane proteins and, 238, 240
FRI genes
vernalization and, 495–96, 499–500
Fructans
starch degradation and, 84
FT genes
vernalization and, 496
Fucose
starch degradation and, 80
Fungi
abscisic acid biosynthesis and catabolism, 175, 177
calcium oxalate in plants and, 45–46
endocytic cycling of plasma membrane proteins and, 221
phytoremediation and, 22

G

Galactose
  starch degradation and, 80
Galdieria sulphuraria
  solute transporters of plastid envelope membrane and, 155
gal operon
  history of research, 4
Gametophytes
  microsporogenesis and microgametogenesis in flowering plants, 393, 418
γ-aminobutyric acid (GABA)
  plant-specific calmodulin-binding proteins and, 447–48
Gasoline
  phytoremediation and, 16, 23
Gene function studies
  microsporogenesis and microgametogenesis in flowering plants, 393
General rhizosphere effect
  phytoremediation and, 22
Genetically-modified organisms (GMOs)
  history of research, 8
  inteins and, 375, 383–85
Genetics
  history of research, 2–12
Genomics
  CO_2-concentrating mechanisms in algae and, 106, 113
  history of research, 10–11
  inteins and, 383
  phytoremediation and, 26, 31
  self-incompatibility and, 473–74
  starch degradation and, 77–78
Germination
  abscisic acid biosynthesis and catabolism, 173
  redox regulation and, 200–2
Gibberellic acid
  legume seed development and, 261–62
Glucans
  starch degradation and, 73–79, 84–85, 87–91
Glucose
  legume seed development and, 266
  starch degradation and, 79–80, 88–89
Glucose 6-phosphate/phosphate translocator
  solute transporters of plastid envelope membrane and, 145
Glucosyltransferase
  abscisic acid biosynthesis and catabolism, 171
Glutamate decarboxylase
  plant-specific calmodulin-binding proteins and, 447–48
Glutaredoxins
  redox regulation and, 187–209
Glutathione (GSH)
  phytoremediation and, 25–29, 31
  redox regulation and, 187–209
Glycans
  starch degradation and, 80
Gnetum gnemon
  microsporogenesis and microgametogenesis in flowering plants, 404
gnom genes
  endocytic cycling of plasma membrane proteins and, 236–38, 240
gpt genes
  solute transporters of plastid envelope membrane and, 145
Green algae
  abscisic acid biosynthesis and catabolism, 175–76
Green liver model
  phytoremediation and, 28
"Green revolution"
  science in modern society and, 8
Griffithsia spp.
  CO_2-concentrating mechanisms in algae and, 113
Guanine nucleotide exchange factore (GEF)
  endocytic cycling of plasma membrane proteins and, 229–30
Gymnosperms
  calcium oxalate in plants and, 41, 45

H

Halogeton spp.
  calcium oxalate in plants and, 50
Halothiobacillus neopolitans
  CO_2-concentrating mechanisms in algae and, 109
Haplotype
  self-incompatibility and, 467–83
Heat stress
  plant-specific calmodulin-binding proteins and, 445–46
Helianthus annuus
  phytoremediation and, 20
Henry's law constant (H_i)
  phytoremediation and, 21, 29
Heterochromatin
  vernalization and, 496, 498–99, 501
Hexose
  legume seed development and, 257, 259, 261, 265–66

starch degradation and, 80–81, 85, 88, 91
Higher-order networks
history of research, 11–12
Higher plants
CO_2-concentrating mechanisms in algae and, 99
cytokinesis and, 281–93
High-throughput robotic screening methods
solute transporters of plastid envelope membrane and, 156
Histones
chromatin dynamics and, 327, 331, 335–36
vernalization and, 491, 497–501, 503
Homologous recombination
microsporogenesis and microgametogenesis in flowering plants, 410–14
HopPtoD2 protein phosphatase
phytopathogenic bacterial type III effectors and, 522–23
Hordeum vulgare
vernalization and, 495
Hormones
microsporogenesis and microgametogenesis in flowering plants, 393
plant-specific calmodulin-binding proteins and, 453–54
HOS1 gene
vernalization and, 501
Host defense
phytopathogenic bacterial type III effectors and, 509
HP genes
vernalization and, 498–501
hrp genes
phytopathogenic bacterial type III effectors and, 510–11
Human health
calcium oxalate in plants and, 43, 45, 50–51
Hydraulic control
phytoremediation and, 18
Hydrolytic degradation
starch degradation and, 85
Hydroxylation
abscisic acid biosynthesis and catabolism, 165, 168, 170
Hyoscyamus niger
vernalization and, 493, 495
Hyperaccumulators
phytoremediation and, 20
Hypersensitive response
plant-specific calmodulin-binding proteins and, 449
Hypoxia
legume seed development and, 263–64, 270

I

ICE1 gene
vernalization and, 494
Idioblasts
calcium oxalate in plants and, 41, 43, 45, 47–49, 52–57, 60–61
Imprinting
chromatin dynamics and, 338–39
Inflorescence
shoot branching and, 353, 364–66
Inhibitor model
self-incompatibility and, 476–78
Inorganic pollutants
phytoremediation and, 15–31
Insertion sequence (IS) elements
history of research, 4–5
Inteins
acetolactate synthase, 379–81
biofiber production, 387–88
conclusions, 388
5-enolpyruvylshikimate-3-phosphate synthase, 381–83
introduction, 376
plants, 383–85
protein purification, 385–86
protein splicing mechanism, 376
tags, 385–86
transgene containment, 378–85
trans-splicing inteins, 378–79
types, 377–78
Internalization mechanisms
endocytic cycling of plasma membrane proteins and, 221–40
Interpenetrant crystals
calcium oxalate in plants and, 44
Invertases
legume seed development and, 257
In vitro expression technology (IVET)
phytopathogenic bacterial type III effectors and, 512
Ipomea trifida
self-incompatibility and, 483
ISA genes
starch degradation and, 78, 80, 84–85
Isoprenoids
abscisic acid biosynthesis and catabolism, 165–77

J

Jasmonic acid (JA)
microsporogenesis and microgametogenesis in flowering plants, 419–20
phytopathogenic bacterial type III effectors and, 514–16, 524

K

KAT1 inwardly rectifying potassium channel
endocytic cycling of plasma membrane proteins and, 221–22, 238, 239–40

L

lac operon
history of research, 4
LCYB genes
abscisic acid biosynthesis and catabolism, 168
Leaves
phytoremediation and, 27–28
shoot branching and, 353–69
starch degradation and, 73–91
Legume seed development
abscisic acid, 261–62
cell cycle, 257–58
control, 255–58, 260–62
cytosol, 267
developmental gradients, 255
differentiation, 260
early seed development, 255–58
embryo maturation, 260–62
embryonic transfer cells, 258–60
energy metabolism, 263–64
filial control, 258–60
future research, 269–70
growth characteristics, 255
hypoxic conditions, 263–64
introduction, 254–55
invertases, 257
maternal control, 257–58
metabolic control, 257–58
metabolism, 266–69
metabolite distribution, 260
nitrogen transport/availability, 267–68
oxygen, 264
perspectives, 269–70
phosphorylation, 262–63
photoheterotrophic seed metabolism, 264–67
photosynthesis, 264, 266
plastids, 266–67
redox signaling, 265–66
regulation, 262–63
seed coat, 255–57
signaling, 259–62, 265–66
sink strength, 268–69
SnRK1 kinases, 263
storage protein synthesis, 267–69
sucrose, 260–61
sugar signal interaction, 262
sugars, 257
summary, 270
targets, 262–63
transition stage, 258–60
Lemna spp.
calcium oxalate in plants and, 47, 52
phytoremediation and, 20
LFY genes
vernalization and, 496
Lhcb gene
redox regulation and, 198
Lichens
calcium oxalate in plants and, 45–46
Light/dark conditions
CO_2-concentrating mechanisms in algae and, 115
redox regulation and, 193
Light nonaqueous phase liquid (LNAPL)
phytoremediation and, 21
Linalool synthases
evolution of flavors and scents, 315–17
Lipid transfer proteins
evolution of flavors and scents, 320
Lipopolysaccharide (LPS)
phytopathogenic bacterial type III effectors and, 516
Log K_{ow}
phytoremediation and, 21, 24, 26
Lolium spp.
phytoremediation and, 20
Lower plants
abscisic acid biosynthesis and catabolism, 175–77
calcium oxalate in plants and, 45
Low temperature response
vernalization and, 491–503
Lunaria bienis
vernalization and, 493
Lycopersicon spp.
self-incompatibility and, 476–77

M
MADS-box genes
vernalization and, 495–503
MAF genes
vernalization and, 501
Major facilitator superfamily
solute transporters of plastid envelope membrane and, 149
Male determinant
self-incompatibility and, 470–72, 476–77, 479
Male reproductive development
microsporogenesis and microgametogenesis in flowering plants, 393–420
Maltose
starch degradation and, 73, 76, 78–80, 82–83, 85–86, 88–89, 91
Maltotriose
starch degradation and, 79–80
Mannose
starch degradation and, 80
Maternal control
legume seed development and, 257–58
Maturation
abscisic acid biosynthesis and catabolism, 172–73
legume seed development and, 253–70
Medicago spp.
calcium oxalate in plants and, 58–60
legume seed development and, 263
Meiosis
microsporogenesis and microgametogenesis in flowering plants, 393, 407–16
Membrane fusion
cytokinesis in higher plants and, 281, 284–86, 288–89
Membrane trafficking
cytokinesis in higher plants and, 281, 283–84
Mentha aquatica
evolution of flavors and scents, 315–17
Mesembryanthemum crystallinum
endocytic cycling of plasma membrane proteins and, 238
solute transporters of plastid envelope membrane and, 145
Mesophyll tissues
solute transporters of plastid envelope membrane and, 145–47
Metabolism
abscisic acid biosynthesis and catabolism, 171–77
CO_2-concentrating mechanisms in algae and, 103
evolution of flavors and scents, 301–20
legume seed development and, 253, 257–58, 263–69
solute transporters of plastid envelope membrane and, 133–56
starch degradation and. 78–79, 83–86, 88–89, 91
Metallothioneins
phytoremediation and, 25–27
Metals
calcium oxalate in plants and, 46, 50, 60–61
phytoremediation and, 15, 19–20, 22–31
Methylation
chromatin dynamics and, 327, 331–35, 339–41
O-Methyltransferases
evolution of flavors and scents, 301, 304–9, 313–15, 318
Mevinolinic acid (MVA) pathway
abscisic acid biosynthesis and catabolism, 175
MEX1 gene
starch degradation and, 79, 81–83, 85–86, 90
Microarray techniques
history of research, 11–12
Microbes
phytoremediation and, 15–31
Microbial consortia
phytoremediation and, 24
Microbial mats
CO_2-concentrating mechanisms in algae and, 118
Microsporogenesis and microgametogenesis in flowering plants
ABC models, 397–99

stamen identity, 397–404
synapsis, 410–14
tapetum, 405
TPD1, 405–7
Microtubules
cytokinesis in higher plants and, 289–93
Mitochondria
redox regulation and, 199–200
modifier gene
self-incompatibility and, 473
Monocots
shoot branching and, 362–68
Monodus subterraneus
CO_2-concentrating mechanisms in algae and, 102, 113
Morphology
calcium oxalate in plants and, 41, 44–45, 48, 55, 57–61
Mougeotia spp.
CO_2-concentrating mechanisms in algae and, 109
MTBE
phytoremediation and, 16, 19, 29
Myriophyllum spp.
calcium oxalate in plants and, 56
phytoremediation and, 20

N

NADP/NADPH
redox regulation and, 187–209
Nannochloropsis spp.
CO_2-concentrating mechanisms in algae and, 110, 113, 117
NCED genes
abscisic acid biosynthesis and catabolism, 167–68, 173–74, 176
ndh genes
CO_2-concentrating mechanisms in algae and, 108
Neoxanthin
abscisic acid biosynthesis and catabolism, 167–68
Neurospora spp.
chromatin dynamics and, 332
Nicotiana spp.
abscisic acid biosynthesis and catabolism, 166–67, 174
inteins and, 385
legume seed development and, 256
phytopathogenic bacterial type III effectors and, 512–13
self-incompatibility and, 474–77
Nicotiananime
phytoremediation and, 25–27
Nitrogen
legume seed development and, 267–68
Nostoc spp.
CO_2-concentrating mechanisms in algae and, 107
notabilis gene
abscisic acid biosynthesis and catabolism, 168
NSY genes
abscisic acid biosynthesis and catabolism, 168
ntpJ gene
CO_2-concentrating mechanisms in algae and, 106–7
Nuclear localization signal (NLS)
phytopathogenic bacterial type III effectors and, 517
Nuclear magnetic resonance (NMR)
plant-specific calmodulin-binding proteins and, 439
Nucleotide-binding domains
solute transporters of plastid envelope membrane and, 143
Nutrient budget
CO_2-concentrating mechanisms in algae and, 99, 115–16

O

Ocimum basilicum
evolution of flavors and scents, 301, 308–11, 314–15, 317–19
Oil
phytoremediation and, 16, 23
Organic acids
phytoremediation and, 25–29
Organic pollutants
phytoremediation and, 15–31
Osaba1 gene
abscisic acid biosynthesis and catabolism, 167
Osmotic stress
plant-specific calmodulin-binding proteins and, 441–45
Outer envelope proteins (OEPs)
solute transporters of plastid envelope membrane and, 147–48
Oxalic acid
calcium oxalate in plants and, 41

Oxidative regulation
redox regulation and, 202–3
Oxidative stress
plant-specific calmodulin-binding proteins and, 446–47
Oxygen (O_2)
legume seed development and, 253, 264
redox regulation and, 187, 202–6
starch degradation and, 82

P

Panicum spp.
phytoremediation and, 20
Pantoea spp.
phytopathogenic bacterial type III effectors and, 510
Papaver rhoeas
self-incompatibility and, 479–80, 482
Papilla cells
self-incompatibility and, 467, 470–71
Paramutation
chromatin dynamics and, 338
Partitioning
cytokinesis in higher plants and, 281–93
legume seed development and, 253
Pathogen-associated molecular pattern (PAMP)
phytopathogenic bacterial type III effectors and, 515
Pathogenesis
phytopathogenic bacterial type III effectors and, 509–24
plant-specific calmodulin-binding proteins and, 449–53
PC genes
vernalization and, 498
Penetrance
history of research, 9
Peperomia spp.
calcium oxalate in plants and, 43
Peridinium gatunense
CO_2-concentrating mechanisms in algae and, 114
Perilla frutescens
evolution of flavors and scents, 315–17
Petroleum hydrocarbons
phytoremediation and, 16, 23
Petunia spp.
self-incompatibility and, 475, 477–78
pH
phytoremediation and, 22
starch degradation and, 82
Phaeocystis globosa
CO_2-concentrating mechanisms in algae and, 113
Phaeodactylum spp.
CO_2-concentrating mechanisms in algae and, 113–15
Phaseolus vulgaris
abscisic acid biosynthesis and catabolism, 174
plant-specific calmodulin-binding proteins and, 450
PHD-finger proteins
vernalization and, 497, 503
Phenotype
calcium oxalate in plants and, 59–60
history of research, 9–11
Phenylpropanoids
evolution of flavors and scents, 301, 304, 308, 318–19
Phosphate translocator
solute transporters of plastid envelope membrane and, 144–47, 150–54
Phosphoenolpyruvate carboxykinase (PEPck)
CO_2-concentrating mechanisms in algae and, 103, 111–12, 114
Phosphoenolpyruvate/phosphate translocator
solute transporters of plastid envelope membrane and, 145–47
Phosphorylation
legume seed development and, 253, 262–63
starch degradation and, 77, 83, 85, 91
Photoheterotrophic seed metabolism
legume seed development and, 253, 264–67
Photoperiodicity
starch degradation and, 74–75, 81, 83–85, 91
redox regulation and, 193
Photosynthesis
calcium oxalate in plants and, 41, 45
CO_2-concentrating mechanisms in algae and, 99, 106, 113, 116, 118, 120
legume seed development and, 264, 266
redox regulation and, 187–88, 202
starch degradation and, 74, 84, 86
Photosystems I/II
redox regulation and, 193–98
Phragmoplast
cytokinesis in higher plants and, 281, 289–93
Physcomitrella spp.
abscisic acid biosynthesis and catabolism, 176
legume seed development and, 258
plant-specific calmodulin-binding proteins and, 444
Phytochelatins

phytoremediation and, 25–28
Phytomers
shoot branching and, 353–69
Phytomining
phytoremediation and, 19
Phytoremediation
advantages, 16–18
bioavailability, 21–22
biological processes affecting, 21–29
chelation, 25–28
compartmentation, 25–28
degradation, 28–29
introduction, 16–21
leaves, 27–28
limitations, 16–18

history of research, 9, 11
Polarized cells
plant-specific calmodulin-binding proteins and, 454–56
Pollen
microsporogenesis and microgametogenesis in flowering plants, 393, 416–18
self-incompatibility and, 467, 470–71, 478–82
Pollution
phytoremediation and, 15–31
Polyaromatic hydrocarbons (PAHs)
phytoremediation and, 16, 19–21, 23, 30
Polychlorinated biphenyls (PCBs)
phytoremediation and, 16, 19–21, 23
Polycomb (PcG)-mediated gene repression
chromatin dynamics and, 333–34

vernalization and, 491, 497–99
Polygeny
history of research, 9
Polymorphic locus
self-incompatibility and, 467–68
Populus spp.
phytoremediation and, 20
Porphyridium spp.
CO_2-concentrating mechanisms in algae and, 113–14
Positive-inside rule
solute transporters of plastid envelope membrane and, 151
Posttranscriptional regulation
abscisic acid biosynthesis and catabolism, 165
PPT genes
solute transporters of plastid envelope membrane and, 145–47
Preprotein and amino acid transporter (PRAT)
solute transporters of plastid envelope membrane and, 147
Prevacuolar compartment
endocytic cycling of plasma membrane proteins and, 232
Prismatic crystals
calcium oxalate in plants and, 44, 60
Prochlorococcus spp.
CO_2-concentrating mechanisms in algae and, 107–9
Programmed cell death
phytopathogenic bacterial type III effectors and, 512–14
redox regulation and, 205
self-incompatibility and, 467–82
Proteasomes
self-incompatibility and, 478
Protein disulfide isomerase (PDI)
redox regulation and, 187
Protein phosphatases
phytopathogenic bacterial type III effectors and, 522–23
Protein purification
inteins and, 375, 385–86
Protein splicing elements
inteins and, 375–88
Proteomics
redox regulation and, 196, 202
solute transporters of plastid envelope membrane and, 133, 135, 140–43, 155
Prunus spp.
self-incompatibility and, 478
psbA gene
redox regulation and, 198
Pseudomonas spp.
CO_2-concentrating mechanisms in algae and, 107
phytopathogenic bacterial type III effectors and, 510, 512–17, 520–23
plant-specific calmodulin-binding proteins and, 450, 452
redox regulation and, 206
Pteris vittata
phytoremediation and, 20
Pyrenoids
CO_2-concentrating mechanisms in algae and, 99, 110–11, 114, 118, 120
Pyrus pyrifolia
self-incompatibility and, 475

Q

Quantitative genetics
history of research, 9–10

R

Rab GTPases
endocytic cycling of plasma membrane proteins and, 231–32
Radiobiology
history of research, 6, 10
Ralstonia spp.
phytopathogenic bacterial type III effectors and, 510, 512, 519
Raphanus sativus
vernalization and, 494
Raphide crystals
calcium oxalate in plants and, 43–45, 48, 53–55, 58
RCP1 gene
starch degradation and, 90
Reactive oxygen speacies (ROS)
redox regulation and, 187, 202–6
Receptor kinases
self-incompatibility and, 467–83
Recombination
microsporogenesis and microgametogenesis in flowering plants, 410–14
Recycling
endocytic cycling of plasma membrane proteins and, 221–40
Red algae
CO_2-concentrating mechanisms in algae and, 112–14

solute transporters of plastid envelope membrane and, 149, 155
Redox potential
legume seed development and, 265–66
starch degradation and, 82–83
Redox regulation
biological stresses, 205–6
conclusions, 209
disulfide groups, 189–93
diversity, 195–96
electrostatically-interacting proteins, 196
environmental stresses, 205–6
future research, 206–9
glutaredoxins, 191–92
introduction, 188–89
light/dark conditions, 193
miscellaneous disulfide proteins, 192–93
mitochondrial processes, 199–200
NADP, 198–202
oxidative regulation, 202–3
photosystem I, 193–96
photosystem II, 196–98
programmed cell death, 205
protein disulfide isomerases, 192
reactive oxygen species, 202–6
reversible activation/deactivation, 193
seed development and germination, 200–2
self-incompatibility, 202
signaling, 197–98, 203
specificity, 195
state transition, 196–97
summary list, 209
targets, 194–96
thioredoxins, 190–92, 194–95, 201
transcription, 198, 204–5
translation, 204
Remodeling
chromatin dynamics and, 327–41
phytopathogenic bacterial type III effectors and, 516–17
Repeated evolution
evolution of flavors and scents, 301, 304, 308
Reproduction
microsporogenesis and microgametogenesis in flowering plants, 393–420, 393
Resistance proteins
phytopathogenic bacterial type III effectors and, 517
rbI gene
CO_2-concentrating mechanisms in algae and, 110
Rhamnose
starch degradation and, 80
Rhizofiltration
phytoremediation and, 18–20
Rhizosphere remediation
phytoremediation and, 22–24
Rhombohedral crystals
calcium oxalate in plants and, 44
Ribonucleases
self-incompatibility and, 467
Riccia fluitans
abscisic acid biosynthesis and catabolism, 176
RNAi
chromatin dynamics and, 327, 339–41
RNA-induced gene silencing
chromatin dynamics and, 336–37
Roots
phytoremediation and, 25–26
Rosa spp.
evolution of flavors and scents, 305–15
Rubisco
CO_2-concentrating mechanisms in algae and, 99–120
legume seed development and, 266

S

sacI gene
CO_2-concentrating mechanisms in algae and, 116
Saccharomyces cerevisiae
chromatin dynamics and, 329
endocytic cycling of plasma membrane proteins and, 228
microsporogenesis and microgametogenesis in flowering plants, 412
sadI gene
abscisic acid biosynthesis and catabolism, 171
Salicornia spp.
phytoremediation and, 20
Salinity
plant-specific calmodulin-binding proteins and, 444–45
Salix spp.
phytoremediation and, 20
Salmonella typhimurium
inteins and, 381–83
phytopathogenic bacterial type III effectors and, 523
sbtA gene
CO_2-concentrating mechanisms in algae and, 106–7
Scanning electron micriscopy (SEM)

calcium oxalate in plants and, 43
Scents
evolution of flavors and scents, 301–20
Schizosaccharomyces pombe
chromatin dynamics and, 336
microsporogenesis and microgametogenesis in flowering plants, 412
Secondary shoot meristem
shoot branching and, 353–69
Second messengers
shoot branching and, 360–61
Seeds
abscisic acid biosynthesis and catabolism, 165, 172–73
legume seed development and, 253–70
redox regulation and, 200–2
self-incompatibility and, 470
starch degradation and, 73, 87, 89–91
Self-incompatibility
Brassicaceae-type, 468–69, 472
female determinant, 470, 472
male determinant, 470–72
signal transduction, 472–74
stigma, 472–74
conclusions, 482
future perspectives, 482
introduction, 468
Papaveraceae-type
female determinant, 479
male determinant, 479
signaling cascade in incompatible pollen, 479–82
redox regulation and, 202
Solanaceae-type
female determinant, 474–76
male determinant, 476–77
S-haplotype-specific pollen inhibition, 478
summary, 483
SET1 gene
vernalization and, 499
sex genes
starch degradation and, 77, 83, 90
S-haplotype-specific pollen inhibition
self-incompatibility and, 467–83
Sh gene
history of research, 5
Shoot branching
alternate branching models, 365
auxins, 357–58, 360–62
axillary meristem
dormancy, 358–59
fate, 358
initiation, 356–58, 363–64
outgrowth, 358, 363–64, 366
bud activity
developmental regulation, 359–60
environmental regulation, 362
conclusions, 368–69
dicots, 354–62
floral and inflorescence meristem identity genes, 366–67
inflorescence development, 364–66
introduction, 354
monocots, 362–68
novel meristem identity genes, 367–68
phytomer diversity, 354–56
second messengers, 360–61
spikelet meristem determinacy/identity, 367–68
transition from floral to meristem identity, 368
transport autoinhibition, 361–62
vegetative development, 363
Sida rhombifolia
calcium oxalate in plants and, 50
Signaling
legume seed development and, 259–62, 265–66
microsporogenesis and microgametogenesis in flowering plants, 393
phytopathogenic bacterial type III effectors and, 509, 517, 524
plant-specific calmodulin-binding proteins and, 435–56
redox regulation and, 187–209
self-incompatibility and, 467, 472–74, 479–82
Sink strength
legume seed development and, 268–69
Sister chromatid cohesion
microsporogenesis and microgametogenesis in flowering plants, 408–10
S-locus
self-incompatibility and, 467–68, 470–71, 476–77, 482–83
slr 1512 gene
CO_2-concentrating mechanisms in algae and, 106
SNARE proteins
endocytic cycling of plasma membrane proteins and, 232
SnRK1 kinases
legume seed development and, 253, 263, 266
SOC1 gene
vernalization and, 496
Soil remediation
phytoremediation and, 15–31
Solanum spp.

self-incompatibility and, 474–78
Somatic cells
cytokinesis in higher plants and, 281–93
Spartina spp.
phytoremediation and, 20
Specialization
calcium oxalate in plants and, 52–56
Specificity
evolution of flavors and scents, 301, 308, 312
redox regulation and, 195
Spikelet
shoot branching and, 353–69
Splicing
inteins and, 375–88
Split-gene technique
inteins and, 375–88
SPL/NZZ gene
microsporogenesis and microgametogenesis in flowering plants, 404
Sporophytes
microsporogenesis and microgametogenesis in flowering plants, 393, 417–18
Stabilization
pollutant
phytoremediation and, 15, 19–20, 25
Stamen
microsporogenesis and microgametogenesis in flowering plants, 393, 395–404
Starch degradation
conclusions, 90–91
cytosol, 79–80
debranching, 77–78
enzyme activity, 82–83
flux, 81–83
gene expression, 81–82
glucans, 78–79, 84–85, 89–90
granule attack, 76, 86–89
granule surface, 75–77
hydrolytic degradation, 85
introduction, 74
maltose, 79–80, 85–86
maltotriose, 79
metabolism, 78–79, 85–86
pathway in *Arabidopsis* leaves, 74–84
pathway in leaves of miscellaneous species, 84–86
pathway in various plant organs, 86–90
phosphorolytic degradation, 85
phosphorylating enzymes, 77
regulation, 81–83
storage organs, 86–90
summary, 91
vegetative tissues, 90
Starlinger P, 1–12
State transition
redox regulation and, 196–97
Stem segment
shoot branching and, 353–69
Stigma
self-incompatibility and, 467, 470–74
Stimulation
phytoremediation and, 19–20, 23
Storage organs
starch degradation and, 86–91
Storage product synthesis
legume seed development and, 253
Storage proteins
legume seed development and, 267–69
Stress adaptation
abscisic acid biosynthesis and catabolism, 165, 174
plant-specific calmodulin-binding proteins and, 435, 443–53
redox regulation and, 205–6
Stroma
CO_2-concentrating mechanisms in algae and, 114
solute transporters of plastid envelope membrane and, 133–56
Srt7 gene
redox regulation and, 197
Styloid crystals
calcium oxalate in plants and, 44, 48, 58
Sucrose
legume seed development and, 257, 259–61, 263, 265–66
starch degradation and, 74, 81, 84–85, 88
Sugars
legume seed development and, 253, 257, 262–63, 265–66
starch degradation and, 73–91
SUMO genes
phytopathogenic bacterial type III effectors and, 517–19
vernalization and, 501
Suppression
history of research, 9
phytopathogenic bacterial type III effectors and, 512–14, 516–17
Sweet basil flavor
evolution of flavors and scents, 301, 308–9, 317–19
Synapsis
microsporogenesis and microgametogenesis in flowering plants, 410–14

Synechococcus spp.
CO_2-concentrating mechanisms in algae and, 108–9, 117
Synechocystis spp.
CO_2-concentrating mechanisms in algae and, 106–7
redox regulation and, 195–96

T

Tags

microsporogenesis and microgametogenesis in flowering plants, 393–420, 393
phytopathogenic bacterial type III effectors and, 517
redox regulation and, 198, 204–5
vernalization and, 499–501
Transcriptomes
starch degradation and, 81
Transgenes
inteins and, 375–88
legume seed development and, 253–70
phytoremediation and, 15, 21, 29–31
plant-specific calmodulin-binding proteins and, 444, 448, 450–51
self-incompatibility and, 470
solute transporters of plastid envelope membrane and, 146–47
starch degradation and, 85, 87, 90
Transglucosylation reaction
starch degradation and, 73, 75, 79–83, 85–86, 90–91
Transition stage
legume seed development and, 255, 258–60
Translation
redox regulation and, 204
Translocation
phytoremediation and, 25–27
solute transporters of plastid envelope membrane and, 144–47, 150–54
Transmembrane domains
solute transporters of plastid envelope membrane and, 143, 149–53
Transpiration stream concentration factor (TSCF) ratio
phytoremediation and, 26
Transposable element insertions
history of research, 4–6
vernalization and, 496
trans-splicing
inteins and, 377–79, 384, 387–88
Trehalose
legume seed development and, 261
Trichloroethene (TCE)
phytoremediation and, 16–20, 29
Trichodesmium erythreum
CO_2-concentrating mechanisms in algae and, 107–9

Trinitrotoluene (TNT)
phytoremediation and, 16, 19, 28–30
Triose phosphate/phosphate translocator
solute transporters of plastid envelope membrane and, 144–45, 150–53
Trithorax group (trxG)
chromatin dynamics and, 333–34
Triticum aestivum
vernalization and, 495
Tubulo-vesicular networks
cytokinesis in higher plants and, 281–93
Twinning
calcium oxalate in plants and, 44
Type III secretion system (TTSS) effectors
phytopathogenic
AvrRpt2 cysteine protease, 520–22
biochemical activity, 517–23
conclusions, 523–24

phytoremediation and, 15, 19, 27, 29, 31

vp14 gene
abscisic acid biosynthesis and catabolism, 167–68
VRN genes
vernalization and, 496–500, 502

W

Weddellite
calcium oxalate in plants and, 44
Wetlands
constructed
phytoremediation and, 18–20, 24
Whewellite
calcium oxalate in plants and, 44
Winter
vernalization and, 491–503

X

Xanthomonas spp.
abscisic acid biosynthesis and catabolism, 174
phytopathogenic bacterial type III effectors and, 510, 512, 516–19
Xanthophylls
abscisic acid biosynthesis and catabolism, 168
Xenobiotic compounds
plant-specific calmodulin-binding proteins and, 448–49
XopD protein
phytopathogenic bacterial type III effectors and, 517–19
Xylose
starch degradation and, 80
Xylulose 5P/phosphate translocator
solute transporters of plastid envelope membrane and, 147

Y

Yeasts
chromatin dynamics and, 329, 336
endocytic cycling of plasma membrane proteins and, 228
microsporogenesis and microgametogenesis in flowering plants, 412
plant-specific calmodulin-binding proteins and, 455
Yersinia spp.
phytopathogenic bacterial type III effectors and, 517, 519–20, 523
YopJ protein
phytopathogenic bacterial type III effectors and, 517–19
YopT cysteine protease family
phytopathogenic bacterial type III effectors and, 519–20
Yucca torreyii
calcium oxalate in plants and, 52

Z

ZCCT family zinc finger proteins
vernalization and, 496, 503
Zea mays
history of research, 5
Zeaxanthin
abscisic acid biosynthesis and catabolism, 166–67
ZEP gene
abscisic acid biosynthesis and catabolism, 173–74, 176
ZmMRP1 gene
legume seed development and, 260

Annual Review of
Plant Biology

Volume 56, 2005

Contents

Fifty Good Years
Peter Starlinger 1

Phytoremediation
Elizabeth Pilon-Smits 15

Calcium Oxalate in Plants: Formation and Function
Vincent R. Franceschi and Paul A. Nakata 41

Starch Degradation
Alison M. Smith, Samuel C. Zeeman, and Steven M. Smith 73

CO_2 Concentrating Mechanisms in Algae: Mechanisms, Environmental Modulation, and Evolution
Mario Giordano, John Beardall, and John A. Raven 99

Solute Transporters of the Plastid Envelope Membrane
Andreas P.M. Weber, Rainer Schwacke, and Ulf-Ingo Flügge 133

Abscisic Acid Biosynthesis and Catabolism
Eiji Nambara and Annie Marion-Poll 165

Redox Regulation: A Broadening Horizon
Bob B. Buchanan and Yves Balmer 187

Endocytotic Cycling of PM Proteins
Angus S. Murphy, Anindita Bandyopadhyay, Susanne E. Holstein, and Wendy A. Peer 221

Molecular Physiology of Legume Seed Development
Hans Weber, Ljudmilla Borisjuk, and Ulrich Wobus 253

Cytokinesis in Higher Plants
Gerd Jürgens 281

Evolution of Flavors and Scents
David R. Gang 301

Biology of Chromatin Dynamics
Tzung-Fu Hsieh and Robert L. Fischer 327

Shoot Branching
Paula McSteen and Ottoline Leyser 353

Protein Splicing Elements and Plants: From Transgene Containment to Protein Purification
Thomas C. Evans, Jr., Ming-Qun Xu, and Sriharsa Pradhan 375

Molecular Genetic Analyses of Microsporogenesis and Microgametogenesis in Flowering Plants
Hong Ma 393

Plant-Specific Calmodulin-Binding Proteins
Nicolas Bouché, Ayelet Yellin, Wayne A. Snedden, and Hillel Fromm 435

Self-Incompatibility in Plants
Seiji Takayama and Akira Isogai 467

Remembering Winter: Toward a Molecular Understanding of Vernalization
Sibum Sung and Richard M. Amasino 491

New Insights to the Function of Phytopathogenic Baterial Type III Effectors in Plants
Mary Beth Mudgett 509

INDEXES

Subject Index 533

Cumulative Index of Contributing Authors, Volumes 46–56 557

Cumulative Index of Chapter Titles, Volumes 46–56 562
